SILICON in Indian Agriculture

AUTHORS: N.B. Prakash, N.K. Savant and K.R. Sonar

PRICE: Rs. 1,200
BINDING: Hardback
YEAR: 2018
ISBN: 978-93-83491-95-7
SIZE: 6.5" x 9.5"
PAGES: 198

This book is about the positive effects of silicon on the resistance of various crops to environmental stresses, whilst improving internal quality, post-harvest characteristics and soil fertility pertinent to Indian agriculture. Besides macro and micro-nutrients in recent years, silicon has been found to be a beneficial nutrient for increasing the growth and yields of a wide variety of crops including sugarcane, rice, other cereals, vegetables and fruits. Silicon fertilizer is applied to crops in several countries for increased productivity and sustainable production. It is abundant in soil but its availability is very low. Silicon is required for healthy and productive development of the crop plants. This element is absorbed by crop from the soil in large amounts that are several fold greater than those of any other macro-nutrients. The beneficial effects of silicon may be small under optimum conditions but become obvious under biotic and abiotic stress conditions.

... The work on silicon has been very scarce and scattered and it was very necessary to compile the work done on silicon in India. In this regard, the work done on silicon in different crops at University of Agricultural Sciences, Bangalore is highly commendable and an appreciable effort. The authors have also provided suggestions for further research on silicon with summary and conclusion and relevant citations . . . I am sure that this publication will be of immense use to all concerned with fertilizer use and agricultural development . . .

– Dr. H. Shivanna
 Vice Chancellor, UAS, Bangalore
